VERSION WITH MARKINGS TO SHOW CHANGES MADE

In the Claims:

- An array comprising at least one pattern of probe oligonucleotide 1. (Twice Amended) spots stably associated with attached to the surface of a solid support, wherein each probe oligonucleotide spot of said pattern comprises an oligonucleotide probe composition made up of long oligonucleotide probes that range in length from about 50 to 100 120 nucleotides.
- The array according to Claim 1, wherein any variance in 36. (Once Amended) hybridization efficiency among any to two probes of said array does not exceed about 10-fold.
- The array according to Claim 14, wherein any variance in 37. (Once Amended) hybridization efficiency among any to two probes of said array does not exceed about 10-fold.
- The array according to Claim 23, wherein any variance in (Once Amended) 38. hybridization efficiency among any to two probes of said array does not exceed about 10-fold.
